

Louvres

Louvres

Use our louvres to improve your comfort, views, energy efficiency, security and design.

Enjoy cooling summer breezes or subdue the wind to a gentle whisper of air. Louvres from Fabtech can control ventilation to increase comfort and energy efficiency. With Fabtech Louvres, virtually a 100% window opening is achieved, which allows maximum ventilation and unobstructed views.

In many situations Fabtech Louvres can remain partially open during wet weather to maintain constant ventilation and help prevent condensation.

Blade Options

With Fabtech Louvres you have the option of Cedar, Glass or Aluminium blades and an extensive range of clip, handle and frame colour options. This flexibility in design allows louvres to add impact to any home.

FABTECH

Wind and Water Performance

In all Fabtech louvres we use the highest quality components. These louvres are energy rated, allowing for better energy conservation especially in colder climates. Fabtech louvres are also extremely weather tight, this is backed by a guarantee, covering all louvres constructed within the brand guidelines.

Experience the practicality

Ever tried to clean the outside of a window from inside? Louvres can be cleaned from inside regardless of what floor you are on. This is especially important in multi storey applications.

Need Privacy or Sunlight Control?

Fabtech louvres when fitted with cedar, obscure glass or hollow aluminium blades can provide total privacy from the outside world, and control the harsh summer sun. Light and air transmission are not affected, so you can enjoy a cooling summer breeze in total privacy and comfort.

Internal use of louvres

Louvres fitted with cedar, decorative glass, or hollow aluminium blades work perfectly as an interior room divider, when the blades are closed. When opened, living areas can be extended with the added benefit of improved internal ventilation.

Fabtech Louvre Options

- Ergonomic locking bars between handles
- Ring handles and map rods for overheight applications
- Both operative and fixed louvre systems
- The choice of two blade widths, 102mm or 152mm
- Keylock mechanisms for extra security

Frame Selection

Fabtech Louvres can be constructed in either a subframe or a complete window frame. The subframe works perfectly when going into existing window features like sliding doors and sidelights. The complete window frame is ideal for stand alone window features. All frames and blades are available in powdercoated, woodgrain or anodised finish. Your local fabricator will let you know which option is best for you.
